BE (E&TC)	PLC SCADA and Automation LAB	
Experiment No: 8	Study of SCADA Using Any Example	**Pages**

Aim:

To study the working of a **SCADA (Supervisory Control and Data Acquisition) system** with the help of a water tank level monitoring and control example.

Theory:

Conclusion:

Questions:

1. What is SCADA? Define its purpose in automation.
2. List the main components of a SCADA system.
3. Differentiate between **PLC** and **SCADA**.
4. What is the role of an **HMI (Human Machine Interface)** in SCADA?
5. Explain how sensors and actuators are interfaced with SCADA through PLC
